The following changes are being implemented May 20, 2010 in the IAQG Online Aerospace Supplier Information System (OASIS) - http://www.iaqg.org/oasis.

1. OASIS has been modified to enable all of the features and functions related to changes in the new 9101-2009/2010 standard. Two key changes affect AABs and CBs:
   a. AABs will now need to enter new auditor approvals as they become available (since this is a new Family of Standards – FOS) to enable assessment entry.
   1. Family of Standards (FOS) level – this is a grouping of standards that matches the grouping/boxes in the Certified Supplier Directory search screen. All standards in the same ‘box’ are considered part of the same Family of Standards (see screenshot below).
   2. This means that all of the standards are considered the same and interchangeable. And that there is no longer a need to add approvals/authentications for each technically equivalent standard, e.g. AS9100C or (pr)EN9100:2009 in case the auditor performs audits in more than one sector or against technically equivalent standards.
   b. CBs, or their designated OASIS administrators, will see significant changes to the assessment entry process if they are entering the new 91XX standard assessments including PEAR’s, more report uploads, etc. For the new standards, it is no longer needed to complete the scoring form and to upload the scoring data. (See screenshots below.)
2. The ability to add number of employees and auditor days for each supplier site (all sites visited) has been added to OASIS as a mandatory input. At a later phase, OASIS will perform a verification against the required minimum number of auditor days.
   a. CBs – The number of employees (and auditor days) is now required for all supplier sites audited.
b. CBs – For auditor days, the previous “grand total” is also required (in addition to the “per site” entries)

3. Separate accreditation is now required for CBs for 91xx:2009
   a. ABs – ABs or their designated OASIS administrators will need to enter the new 9100 FOS level
      accreditations for each CB after reissuance of the new accreditation so that CBs can enter the assessments
      to the new 91XX standards.

4. There are new Feedback Download and Filter Options. The new options will enable users with access to the
   private Manage Feedback application (granted as part of a users association with an AB or CB) to filter the
   feedback based on selected criteria. These new options will also be available to anyone using the public
   feedback application. All feedback request lists can be downloaded as Excel files and further filtered/sorted,
   e.g. on CB or Supplier level.

In case of questions, please contact the IAQG support function at IAQGsupport@sae.org or your sector
representative:

Asia/Pacific:  Yoshitsugu Kanno - kanno@sjac.or.jp
Europe:  Ian Folland – icfolland@btinternet.com
Americas:  Becky DeGutis - bdegutis@sae.org

Sincerely,

The IAQG Database Team
